For more selection, view our full range of Brattonsound Gun Safes. The Sentinel gun safe range are built and tested to BS7558 (the British standard for gunsafes) the Sentinel offers fantastic value for money at our entry level. Even at this level our Sentinel Gunsafes incorporate many security features. The Sentinel range offers storage for between 1 and 5 guns and the models compact sizes help where space is at a premium Superior strength 7 lever safe deadlock(s) - with forged steel bolt, reinforced casing and reinforced internal mechanism Extra door reinforcement - on full height models Models SB2, SC2, ST3 and ST5 are NOT suitable for rifles with scopes Model RD5 is suitable for scoped rifles Models VS1, VS2 and VS3 are ideal for the bottom of understairs cupboards or in vehicle etc Models PA5, PD7 and SC2S are the Pistol/Ammo/Accessory Safes Designed, Engineered and Built in Britain, every Brattonsound gunsafe is manufactured to strict ISO 9001 and BS7558 quality standards. Features On All Brattonsound Gun Safes Comprehensive 3 year on-site warranty in the mainland UK and Northern Ireland Police acceptance guaranteed Strong 2mm thick fully welded construction (including fully welded top) Full length anti-jimmy bar Full length anti-lever flange and door interlock Recessed door High density foam divider and floor mat Outstandingly durable powder coated finish 14mm fixing holes in back and base Optional Extras Shelves - Full width shelves, spaced to your requirements, can be fitted in all models. Hinged Left Hand Side - As standard all models are hinged on the right - Sentinel and Sentinel Plus models can be hinged on the left as an option. Please note: on Sentinel models this will result in the keyholes being upside down, although the operation of the gunsafe is unaffected. Fixing Bolts - We can supply fixing bolts for securing any of our gunsafes to a brick or concrete wall. These are well sized to make fixing the gunsafe as straightforward as possible. Call us for advice about fixing to other types of wall such as breeze block or timber framed houses. Full installations also available. If you're going to be a sharpshooter, then you have to do things right. And no gun enthusiast should ever be without a good quality gun safe. But how much does a good quality gun safe weigh? A gun safe weighs anywhere from 200 pounds for a small (6-10 rifle) entry-level safe, to over 5000 pounds for a permanently installed walk-in safe. The average gun safe used in most residential applications weighs between 200 1000 pounds. Most people want a safe that they can take with them when it's time to move so the entry and mid-range safes tend to be more popular. Let's continue to explore common gun safe sizes. The weight of a gun safe is directly influenced by the gauge of its steel, the layers of fireboard, its size, and the design of the safe. Here are some different types of gun safes and their weight: Entry-Level Gun Safe 200 600 pounds Mid-Range Gun Safe 600 1000 pounds High-End Gun Safe 1000 1600 pounds Commercial Safe 2000 5000 pounds Now that we know the approximate weight of the different types of guns, let's look at specifically sized gun safes so you can get a better idea of what you're needing. You can find Quality Gun Safes Here on Amazon or check out my other favorite places like Brownells or OpticsPlanet for good deals on gun safes. Many different things go into what makes the gun safe heavier. A lot of people assume that the heavier the gun safe then the better quality it has to be. But bigger isn't always better so it's good to know the quality of the design and materials that have been used for the gun safe. For this we need to look at: The Design of the Safe The Gauge of the Steel The Layers of the Fireboard The Size of the Safe There are two parts involved in the design of the gun safe which I've found directly impact the weight of the gun safe: The number of layers of steel the more layers there are to a gun safe means more material and, you guessed it, the heavier its going to weigh. The composite concrete layers are used to protect your firearms from a fire or any chance of overheating. The composite concrete ensures that if your safe reaches 180 degrees Fahrenheit, the material will release steam to maintain the temperature of the safe between 200 240 degrees Fahrenheit and damage your guns or other valuables. The gauge of the steel is a measure of how thick the steel is. The thicker the steel, the more it's going to weigh. The gauge method actually measures thickness backward, so the higher the gauge the lighter the steel. A good quality gun safe will usually have a gauge of 10 (0.1345 inches) to 6 (0.1943 inches). Most gun safes will have an insulation layer of fireboard, usually made of composite concrete to fireproof the safe and the contents of the safe in the best condition possible. It goes without saying that the bigger your safe, the more it's going to weigh purely because there are a lot more materials that need to go into making the safe. Here's a quick video talking about safe design and weight: You can find Quality Gun Safes Here on Amazon or check out my other favorite places like Brownells or OpticsPlanet for good deals on gun safes. Considering there are different aspects that go into what makes a gun safe heavy, you can use a general rule of thumb to say that the heavier the weight of the gun safe, means it is a good quality safe. We don't measure quality by size alone with a gun safe because an entry-level safe and a high-end safe could be the same size, but the weight will determine which one is the better quality. That being said, it's always best to check the design before assuming the weight makes it the best quality, because sometimes the weight is made up for in the wrong places of the safe. A 10-gun safe doesn't have a specific weight, but due to its size, it usually weighs between 200 to 1600 pounds. The weight will be less if the size is smaller because of the design is for a limited gun capacity. The majority of the 10-gun safes don't need to have as many layers or fireboard layers and this takes quite the load off of the weight of the gun safe. Entry level 10 gun safe (200 600 pounds) Mid-range 10 gun safe (600 1000 pounds) High-end 10 gun safe (1000 1600 pounds) A 12-gun safe weighs about the same as a 10-gun safe, between 200 to 1600 pounds. Because of its smaller size compared to commercial gun safes with bigger capacities, a 12-gun will usually weigh less. Entry-level 12 gun safe (200 600 pounds) Mid-range 12 gun safe (600 1000 pounds) High-end 12 gun safe (1000 1600 pounds) Because the 22 gun safe has a much higher capacity, it will also have a heavier weight to it too. This is a good thing because if a bigger safe has less weight, it usually means the steel gauge is less or it has used fewer layers in the design and not be as good quality. Entry level 22 gun safe (300 600 pounds) Mid-range 22 gun safe (600 1000 pounds) High-end 22 gun safe (1000 1600 pounds) Commercial 22 gun safe (2000 5000 pounds) The 24 gun safe is one of the heavier gun safes because of its size and the sheer amount of materials it needs to make the size of the safe. A good entry-level 24-gun safe should start weighing in at 300 pounds. Entry level 24 gun safe (300 600 pounds) Mid-range 24 gun safe (600 1000 pounds) High-end 24 gun safe (1000 1600 pounds) Commercial 24 gun safe (2000 5000 pounds) So when you're looking for the perfect gun safe, you can get a good idea of the quality of the gun safe you're looking for when you look at the weight of it. But it's always a good idea to check the design of the gun safe before just assuming it's a great safe. A heavy gun safe could mean it has a really heavy door, which will stop you from having easy access to your guns, and could be a problem in the future if the safe takes some wear and tear. Weight is a good indicator of quality but always check its design. Skip to product information SentinelCondition: New Regular price \$575.00 USD Regular price Sale price \$575.00 USD Unit price / per Sale Sold out Built to hold up to 12 long guns and 4 handguns, the Sentinel 12 Gun Safe also includes a convenient shelf, letting you store accessories and ammo. With fire resistance up to 1200F for 30 minutes and a hardened steel plate to shield against drill attacks, this safe stands strong in any situation. The built-in door organization keeps smaller items neatly arranged, so you'll always know where everything is. Invest in peace of mind with a gun safe that offers solid protection, smart organization, and the quality you can trust. Share View full details For over 20 years Cheshire Gun Room Ltd has been exporting and importing firearms, worldwide, to destinations as far ranging as Europe and the US to Nepal, Australia and beyond. We can also deal with the imports and exports of accessories such as scopes, moderators, ammunition and most of the items displayed online. From start to finish we endeavor to make the whole experience as pain-free as possible. We are not only able to export guns that we have sold but can also arrange exports for 3rd parties, such as clients who have sold their guns to people abroad or customers looking to move to a different country. We can also assist other gun shops who have enquiries abroad. If you need a gun moving in or out of the UK, we can usually help whatever the circumstances and wherever the destination. We can import and export Section 1, Section 2, Section 5, Air Rifles and Antiques & De-activated weapons. Section 1: Bolt action rifles, high capacity shotguns, long barrelled pistols Section 2: Any shotguns under 3 shots Section 5: Pistols, semi-automatic rifles, fully automatic rifles Antiques: Antique & deactivated weapons, show pieces, war pieces We hold Open Licenses for Europe, USA, Australia, Canada, New Zealand. This greatly speeds up the export process to these destinations eliminating the need, in most cases, to apply for an export permit on a case by case basis. The map below shows a selection of some of the places we have exported to over the years and the type of gun exported. Export Procedure Some Key Points The main method of carriage we will use for transporting your goods will be Air Freight (sea freight and road freight are also available) and the service is known as Door To Port. This means the guns will leave our premises and arrive at your nearest customs served International Airport from where you will arrange collection. Shortly after shipping, you will receive an Airway Bill which will show flight numbers and arrival date. You can then use this to arrange collection of your firearms from the airport. Please note, it is your responsibility as the Importer to be sure of all import regulations and firearms law in your country. In the UK, air rifles are classed as firearms. Because of this we are unable to use couriers such as Fed Ex, UPS etc to send the guns abroad, even if the gun requires no import paperwork in your country, which in a lot of cases they don't, they must still be exported in the same way as a shotgun or a rifle and flown to an airport for you to collect. The only exceptions to this are customers in Mainland Europe. We can ship air rifles to these customers at a vastly reduced cost but only if they are UK Legal Limit I.E Sub 12 f/1b rated. In almost all cases, any shotgun or rifle (and some air rifles) you intend to import will require an import license. This is your responsibility to obtain and we can offer little assistance with this although we will help as much as we can. Firearms licensing, police etc in your country should be able to offer better assistance. Some antique firearms require no import license. See below. Some countries have provisions for antique firearms including USA and Canada. In these cases, providing the guns were manufactured before a certain date, you can forgo a lot of the standard import regulations. This is especially helpful for customers wishing to purchase English Shotguns and Hammer Guns. For example, if you are a US customer you can import a gun produced before 1898 without any import license, import broker or FFL dealer. Whatever the situation or however unsure you might be the best thing to do is get in contact straight away. We are always happy to help and will endeavor to offer the best, most cost effective and quickest solution to your needs. Our passion is guns and shooting, and we love to share that with our customers around the world! You can contact us either by emailing exports@cheshiregunroom.com or by phone on +44 161 480 8222 Option 4 or direct on +44 161 475 0132. We look forward to hearing from you soon! We aim to answer all enquiries within 24 hours on working days. Please note we have staff available to speak/write in the following languages: English Greek, Arabic, Hindi, Punjabi, Urdu, French and Cantonese.
