June Wan/ZDNET Every year, when a new iPhone reaches the market, consumers have the opportunity to upgrade to the last and largest or save a few dollars by buying an old but now reduced model. In one way or another, countless Android users make the change to iOS. That said, there are several methods to move the value of your months or years of photos, videos, text messages and other data from an Android device to an iPhone, but I found that the following is the most effective, safe and easy to use. Also: The best phones at the moment I am a member of the minority that constantly changes phones every month or two, which means data transfer is the second nature at this point, so believe me when I say that these are the best methods. How to transfer data from Android to iPhone Before starting to transfer data, it is always a good practice to do the following: Have at least 75% load: Higher, better. Depending on the amount of data you transfer, it is natural that your phone is hot and, therefore, drain your battery at a much faster rate. Have stable Wi-Fi: We will move the wireless data, which means that a solid and static signal is necessary for the most optimal transfer. Check the amount of data you move: Your iPhone may or may not have enough storage capacity to receive each file. If not, it is now a good time to organize your old files on your Android phone, discover what to do to save, what to store on an external drive, and what to clean before moving. Method 1: Transfer data to iOS My file transfer method is the Move to iOS service itself. [odontologia pediatrica bordoni escobar rojas castillo mercado pdf](#) It will be preloaded on your iPhone so that all you have to do is download the Move to iOS app on your Android device via Google Play Store. Also: That's how the iPhone restores To do the service work, you will need to be in the iOS configuration wizard, which is the home page when you first turn on your new iPhone. If you have already established your Android you can access the home screen, you need to reboot the factory to use the transition to iOS. With the transition to iOS, iPhone generates a unique marriage code. This method is ideal if there are additional files that forgot to move through the first way or if you've already put your iPhone and cannot use the transition to iOS. 1. Go on your Android phone on the settings app look for the Google tab, tap backup and select which categories you want to coincide via devices. You can verify what's being copied by expanding the Google account data on the support details list. Wait until the reserve is complete, open the Ikon sites and enter your mailing documents The data from your Google account should coincide with the iPhone and automatically begin import. 3. Can I use the move to IO's application even if I put my electronic device on? Unfortunately, you can't use the file transfer service if you haven't completed the iOS Setup assistant. My best advice is to secure everything on your new iPhone you want to keep, the iPhone reprocessing plant, use the transition to Ios, and then retrieve what was secured. Make sure you have enough storage to keep everything. What's the fastest way to transfer data from Underwood to Avon?
