Movavi clips is an incredible video and image editor, I use all the time. When I began to do video, they had no edition for them because I did not have one, so I realized that there was something missing for them. I asked my mother if I could get an editor and she said for sure, but it had to be free. We looked and found this app to edit video and photos and it was gratis, so I understood. At the beginning, it was a bit complicated to edit because I never edited before, but after a while I got the way. And here we are now I'm a Pro Editor adding music, editing photos and video and adding some adjustments and how. If you are looking for an editor to edit your video or photos, use Movavi clips! I give this 5 star rating! You answered my comment once with a solution on how to get it on the other phone, but I can not find the answer or a solution now you can please tell me how to do this again. I still love the app even with the time pick up time. I have a new phone now that I want to access it. I love the application most of the time. However, there are times when I have a video on my phone and I try to carry it in Movavi and create and edit this Veho. But when I'm going to play the video so I could edit, the only thing I get is my voice any image any of my voice. I do not know how to fix this and this does not do it all the time, but it's too aggravating when you do when you pay for the service. I understand that technology has sobs as I do. Let me tell you again I like the software the application when it works as if it were supposed and it is worth the money if it does as it is supposed all the time. But I have another problem I lost the phone I had one more license in the river and now I need to transfer this license to my other phone you can help me with this please and thank you for letting me vent a bit. But the contrary à "ç sa great software. Krs in TN Thanks for your opinion! You can find instructions on how to restore the purchase of the application in a new phone at this link: This has been a savior for me! Instead of an Å ç à € "projecting savers, when I tried 5 diferent applications before Movavi and I left myself beyond stressed and frustrated. This app is easy to use, intuitive, good amount of music that is Rights and easy to share also. I used this application mainly with my iPhone when my son is sleeping and I have to finish a video mounting project for my little ones. The selection Of format and quality is definitely enough to have this flexibility that you need to share what you created. I hope this performance and reliability of quality continue. It is always sad to start with an application that you love, So, reaches the popularity and the last thing you know you have stopped becoming friendly to the consumer. Be faithful to Movavi of Quality! Thanks for your opinion!
