# Open your phone companion

Open the your phone companion app and scan this qr code. Open your phone companion app on my phone. Please open your phone companion. Open your phone companion link to windows app. Your phone companion not opening. Can't open your phone companion. Your phone companion app not opening. Open your phone companion link to windows.

This is the Windows 10 phone company app. It is what you will see when you connect the phone in a Windows 10 box. And it is useful and a half to make you install some of the Microsoft apps on the phone. (And these days, there is a decent possibility that those apps will be there first.) But it's not entirely without use. You will notice how the brand and model of the phone is recognized - in this case the Samsung Galaxy S6 Edge. Also note the total charge and if it is currently charging. (Which probably should see how he is connected, but we digressed.) You also have a nice look where you are on storage. On this 128 GB model, 1 98.1 GB available as a user, and 15.7 GB of which it was used. (The Storage of the SD card is empty because there is no outdoor storage space on the GS6, of course.) The Microsoft apps suggest you to download here include OneDrive, OneNote, Skype, Office (OK, Word, Excel and PowerPoint ) And Outlook. Absolutely nothing surprises there. There is a Handy Link for the App Explore File, if you want to go by digging around the file structure accessible to the phone. (Ie, what you can get without root access.) But then there is also a handy file explorer link in the Windows 10 toolbar. The "Import Photos and Video" link opens the Windows 10 Photos app But it has not been able to automatically find the DCIM folder on our GS6 edge. (It's not excessively surprising). After all? Not useful for us as an Android user. But this is what you will find in the Companion app for Windows 10 phones. OnePlus buds are a logical consequence of Apple's successful airpods - each phone phone needs their own wireless earphones now, so popular have devices. So this year OnePlus launched the buds alongside the phone number of an OnePlus North deployment number. I have the same type of airpod look, the same type of charging case as the airpods, and they also connect similarly; open the case and the phone should recognize them instantly by quick pairing, as long as it is running A € Android. OnePlus buds can also work with iPhone, or in fact virtually any device that supports a Bluetooth connection if you need it, even if you don't get the same quick coupling as you run on Android devices A € ~ "Instead they will appear only as Normal Bluetooth earphones. For the best results, you want an ONEPLUS phone A € ~ "Only these phones can update the buds firmware, which looks a bit strange. An ONEPLUS laptop will also be able to give you a complete reading of the current buds of the buds and their case of recharging accompanying.onSplus germoni revision: Design and Setup (image image: OnePlus) in terms of styling, the OnePlus buds correspond to the existing wireless earphones to a certain extent, with a rather angular appearance on the back of each headset. Let's face it, there are only so many different ways that you can design a product like this, but the use of the oval shape with a stem and the small silver finish at the bottom has a distinct feel of Apple. They are not rather longer long wireless conduits, but they are not even the worst competing products similar to those similar to google and samsung, these earphones do not sit in your ear A € ~ "actually stick out relatively far away, too If not so much that you will attract the strange look about your journeys. During our tests, OnePlus buds were fully mounted in our ears and felt stable and safe even with a bit of the head movement in time to music . Opening already mentioned, the configuration could not be really easier. We tested the buds with a North Oneplus phone, and if the It is turned on, recognizing the earphones as soon as the top-up case will open (which automatically puts it into coupling mode). The first time you connect, the OnePlus phone will also look for a firmware update for Bocoli.head in the Bluetooth menu on your Oneplus phone and you can see the battery levels of the left headset, the right earpiece and the IL Case, update the firmware on Diurbuds, and even take them to make a sound if you have lost them along the back of the sofa. With an ONEPLUS phone, you can also customize touch controls (a double TAP skip touch by default) and take advantage of the game mode to reduce audiovisual latency between telephone and earphones. This is our choices for the best wired headphones on the market (credit image: future) OnePlus gems borrow some airpodding tricks: automatically interrupts the audio if you take one or both out of your ears, and this works really well . As soon as you go back the earphones, the music continues (at least during our tests with YouTube music and a North OnePlus). Music sounds are really good through the OnePlus buds. It is crisp and acute and noisy, and you can give your ears a good sandblasting in terms of volume without losing the details of the songs you are listening to. They do not correspond to some of the best earphones on the market, or a premium over-ear headphones obviously, but make a good impression of more expensive hardware (much like the North OnePlus, actually). Viamo only had a fall connection during our test hours, and the budget battery level fell only around 10% with a couple of hours listening. I suspect it's a bit of a false reading - OnePlus says you can expect seven hours of music reproduction, with another 23 hours of top-up offered by the case. Fast charging is supported, which should give you 10 hours of music by listening to only 10 minutes of charging, says ONEPLUS (which are earphones and combined houses). There is no noise that canceled here, but the resistance of water and IPX4 sweat is obtained, so they should be comfortable in the gym or in a rain shower. There is a reduction in calls on calls (three microphones are built in each headset), and we discovered that other people have arrived aloud and clear across the line. OnePlus buds offer solid, all-round performance, even if they don't blow you away with their quality. The best headphones to cancel the noise that the money can buy the budello buds review: price and verdict (image credit: OnePlus) to a simple a, £ 79 / \$ 79, the OnePlus buds are very convenient wireless earphones and in complex that you are probably becoming slightly more than you pay for A € ~ "good quality audio, impressive battery life, decent digactions and a clean design. You don't have some of the leading features like the noise that cancels, but not You would expect to this price. There are better headphones and earphones, but few that offer this kind of value. Perhaps the biggest inconvenience of the OnePlus buds is that you only get the most out of them if you have an ONEPLUS phone, even if you too will do it too a perfectly respectable job for you even on other Android phones, the verdict on the OnePlus gems is a nice simple - if you have an ONEPLUS phone, then it's worth getting, and will give you u The rich and deep audio experience that also includes the Dolby Atmos support. If you don't have an ONEPLUS phone, you can probably find a better option somewhere else, even though it may not enter a price point so economical. You can take the OnePlus buds now in white, gray or North Blue and you get the earphones, the case of charging and a short USB charging cable in the box (USB-A to USB-C, which uses the case). While we think that OnePlus did a good job with buds, especially at this price, they don't do enough to stand out from the crowd. These are the best running headphones for sale at this time now
