Angular Material Date Picker With Range Selection | saturn-datepicker

Let edit our typescript to add value for min and max. `dateMaxDate = new Date(); dateMinDate = new Date('12.12.2019')` form = new FormGroup({}); constructor(private fb: FormBuilder) {} ngOnInit(): void { this.form = this.fb.group({ date3: new Date(), }); } In our component template let add datepicker component and min, max properties. Material datepicker comes with a calendar icon, we don't need to add an icon. I hope you have got some idea. Related Articles Because we had added min and max properties on the material date picker. These properties will disable all dates in the calendar that are before the min and after the max value. We can see that date before Dec 12, 2019, we can't select it. Now we need to import our material module and ReactiveFormModule in the /app/app.module.ts file. `import { NgMaterialModule } from './ng-material/ng-material.module'; @NgModule({ ... To use the Angular material component, we have to import it into our app module. import { MAT_DATE_FORMATS } from '@angular/material/core'; import { CUSTOM_DATE_FORMATS } from './custom-date-formats'; @NgModule({ declarations: [], imports: [... Hence we have imported MatMomentDateModule. How to add min and max properties The min and max properties allow us to add date validation to the date picker input. It is good practice to have a separate module for Angular material. We have started series of tutorials on Angular material design components.], providers: [{ provide: MAT_DATE_FORMATS, useValue: CUSTOM_DATE_FORMATS }], }) export class NgMaterialModule { } When working with material datepicker, we have to import two modules. MatDatepickerModule: For material datepicker UI control. MatNativeDateModule: It use javascript date object implementation. We have installed two libraries along with Material. imports: [... In our previous articles, we had learned how to implement Angular date picker. In this tutorial, we have three objective, first learn how to use Angular material datepicker, secondly how to add our own custom date format for material datepicker and last add date filter like min and max attributes of Angular material. Setting up and configure Angular material datepicker project. export class AppComponent { form = new FormGroup({}); constructor(private fb: FormBuilder) {} ngOnInit(): void { this.form = this.fb.group({ date1: new FormControl(new Date()), }); } } In our component template, let add material date picker component.], exports: [... export class AppComponent { form = new FormGroup({}); constructor(private fb: FormBuilder) {} ngOnInit(): void { this.form = this.fb.group({ date1: new FormControl(new Date()), date2: new FormControl(new Date()), date3: new Date(), }); } } onSubmit() { console.log(this.form.value); } } Angular material date picker Default day switcher Year base date switcher Multiple year date switcher Submit Conclusion We have completed our Angular material datepicker tutorial, we have learned how to use the material datepicker component and its properties. To use our own custom date format, we have to override default format of MAT_DATE_FORMATS. Let's create class called custom-date-formats.ts inside our ng-material folder src/app/ng-material/custom-date-formats.ts. export const CUSTOM_DATE_FORMATS = { parse: { dateInput: 'LL' }, display: { dateInput: 'LL', monthYearLabel: 'MMM YYYY', dateA1yLabel: 'LL', monthYearA1yLabel: 'MMMM YYYY' }, }; } Now we have add our custom date format class in provider, let add this in our material module, ng-material/ng-material.module.ts file as.... In this article, we'll explore and learn Angular material datepicker. ReactiveFormsModule, NgMaterialModule, J`

How to use Angular material datepicker? We had successfully configured the Angular material datepicker application, now we can use the material date picker component. Angular material datepicker example We will demonstrate a few examples of the material date pickers, let first demonstrate a simple example. In our app.component.ts file, we have created a form and let add a code form field.... The JavaScript default implementation does not include all locales around the world. The moment is a popular javascript library for implementing date and time. Angular Material uses DateAdapter of the following options NativeDateAdapter, MomentDateAdapter, or custom DateAdapter. Material date picker has the following components. Component Name Description mat-datepicker The datepicker component allows users to enter a date either through text input or by choosing a date from the calendar. mat-datepicker-toggle This component is optional that gives the user an easy way to open the datepicker pop-up. input-datepicker is composed of text input and a calendar pop-up, connected via the matDatepicker property on the text input. Angular material datepicker format By default material, the date picker has a date format of M/d/yyyy, we can add our own custom date format. Angular Material provides MAT_DATE_FORMATS object and it is collection of formats used by Datepicker to parse and display dates. Let create a module and import all material components on it. `ng g m ng-material-open src/app/ng-material/ng-material.module.ts and replace the existing code with the code shown below. import { NgModule } from '@angular/core'; import { CommonModule } from '@angular/common'; import { MAT_DATE_FORMATS } from '@angular/material/core'; import { MatDatepickerModule } from '@angular/material/datepicker'; import { MatFormFieldModule } from '@angular/material/form-field'; import { MatInputModule } from '@angular/material/input'; import { MatButtonModule } from '@angular/material/button'; import { MatMomentDateModule } from '@angular/material-moment-adapter'; @NgModule({ declarations: [], imports: [CommonModule, MatDatepickerModule, MatFormFieldModule, MatInputModule, MatButtonModule, MatMomentDateModule,] }) export class NgMaterialModule { } We are importing all the required modules in our custom material module file. In our previous articles, we had learned how to install and the best approach of configuring Angular material in our project. Run the following command to create and add Angular Material to our project. ng new angular-material-date-app cd angular-material-date-app ng add @angular/material // Add this two libraries npm install moment --save npm install @angular/material/moment-adapter --save While running the 3rd command will ask you the select theme, material typography, and animation, press yes on all. import * as moment from 'moment'; ...`
