These books are optional or suggested additional reading for IFoA exam subject CM1 that may complement IFoA Core Reading and tuition provider material for this exam subject. Title links lead to book details on the IFoA Library catalogue. From here members, students and exam-registered non-members can 'Request' the book from the IFoA Library Service, subject to availability. Note: We regret that we are unable to lend printed library books during current coronavirus pandemic controls, and direct students to follow 'Access eBook' links for some titles available for after IFoA member login, or to non-members registered for this exam, upon application to libraries@actuaries.org.uk.

Actuarial mathematics. 2nd ed. Bowers, N. L.; Gerber, H. U.; Hickman, J. C. et al. Society of Actuaries, 1997. ISBN: 978-0938959465 (Borrow from libraries) Actuarial mathematics for life contingent risks. 3rd ed.* Dickson, D.C.M.; Hardy, M.R.; Waters, H.R. Cambridge University Press, 2020. ISBN: 978-108478083 (Borrow from libraries) [Library holds earlier 2nd edition, 2020 - Borrow from libraries] [Library holds earlier 1st edition, 2009 - Access eBook after member login to IFoA eLibrary via OpenAthens*] Actuarial models for disability insurance. Haberman, S.; Pitacco, E. Chapman & Hall, 1999. ISBN: 978-0849303890 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via Athens*] The analysis of mortality and other actuarial statistics. 3rd ed. Benjamin, B.; Pollard, J. H. Institute and Faculty of Actuaries, 1993. ISBN: 978-0901066268 (Borrow from libraries) Financial mathematics for actuaries. 2nd ed. Chan, W.-S.; Tse, Y.-K. World Scientific Publishing, 2018. ISBN 9789813224674 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via OpenAthens*] Financial mathematics for actuarial science. Wilders, R.J. CRC Press, 2020. ISBN 9780367253080 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via OpenAthens*] Fundamentals of actuarial mathematics. 3rd ed.* Promislow, D. John Wiley, 2015. ISBN 978-1118782460 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via Athens*] [Library holds earlier edition held: 2nd ed., 2011 - Access eBook after member login to IFoA eLibrary via Athens*] An introduction to the mathematics of finance: a deterministic approach. 2nd ed. S J Garrett. Butterworth-Heinemann, 2013. ISBN 978-0080982403 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via Athens*] See also publisher Elsevier's book site for accompanying material 'Essential topics' available related to this book. Earlier edition: An introduction to the mathematics of finance. [1st ed.] McCutcheon, J. J.; Scott, W. F. Heinemann, 1986. SBN: 978-0434912285 (Borrow from libraries) Life assurance mathematics. Scott, W. F. Heriot-Watt University, 1999. (Borrow from libraries) Life contingencies. Neill, A. Heinemann, 1977. ISBN: 0434914401 (Borrow from libraries) (This book is no longer in print, but has been used as a textbook under earlier education strategies.) Life insurance mathematics. 3rd ed. Gerber, H. U. Springer; Swiss Association of Actuaries, 1997. ISBN: 978-3540622420 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via OpenAthens*] Mathematics of compound interest. Butcher, M. V.; Nesbitt, C. J. Ulrich's Books, 1971. ISBN: 978-0960300013 (Borrow from libraries) Modern actuarial theory and practice. 2nd ed. Booth, P. M.; Chadburn, R. G.; Haberman, S. et al. Chapman & Hall, 2005. ISBN: 978-1584883685 (Borrow from libraries) [Access eBook after member login to IFoA eLibrary via OpenAthens*] Theory of financial decision making. Ingersoll, J. E. Rowman & Littlefield, 1987. ISBN: 978-0847673599 (Borrow from libraries) The theory of interest. 3rd ed. Kellison, S. G. McGraw-Hill-Irwin, 2008. ISBN: 978-0073382449 (Borrow from libraries) These books are optional suggested reading to support study for the CM1 exam: as they were suggested reading for former CT1 and CT5 exams. Non-members can request to borrow these books, subject to availability, after they have registered for the next scheduled CM1 exam. Please contact libraries@actuaries.org.uk confirming your exam date and IFoA registration number. CM1 Core Reading is the key study reference for this exam and is available from the IFoA shop, while students may also work with course materials for this exam from the Actuarial Education Company. Additionally, non-members can apply to the Library Service for temporary access to the titles above where some are available as ebooks, access will be effective until the day after the next scheduled IFoA CM1 examination date. Top reviews Most recent Top reviews Welcome to the Exam FM home page! Please review all of the information and links provided below. Exam FM is a three-hour multiple-choice examination and is offered via computer-based testing (CBT). Enhanced Computer Based Scheduling: STEP 1: Register with the Society of Actuaries by the exam deadline date STEP 2: Receive emailed Acknowledgement/Receipt, wait 1 hour, schedule a seat at a Prometric Center The syllabus for Exam FM develops the candidate's understanding of the fundamental concepts of financial mathematics, and how those concepts are applied in calculating present and accumulated values for various streams of cash flows as a basis for future use in: reserving, valuation, pricing, asset/liability management, investment income, capital budgeting and valuing contingent cash flows. A basic knowledge of calculus and an introductory knowledge of probability is assumed. Recognized by the Canadian Institute of Actuaries. Preface. Acknowledgements. Notation index. Part I THE DETERMINISTIC MODEL. 1 Introduction and motivation. 1.1 Risk and insurance. 1.2 Deterministic versus stochastic models. 1.3 Finance and investments. 1.4 Adequacy and equity. 1.5 Reassessment. 1.6 Conclusion. 2 The basic deterministic model. 2.1 Cashflows. 2.2 An analogy with currencies. 2.3 Discount functions. 2.4 Calculating the discount function. 2.5 Interest and discount rates. 2.6 Constant interest. 2.7 Values and actuarial equivalence. 2.8 Regular pattern cashflows. 2.9 Balances and reserves. 2.10 Time shifting and the splitting identity. *2.11 Change of discount function. *2.12 Internal rates of return. *2.13 Forward prices and term structure. 2.14 Standard notation and terminology. 2.15 Spreadsheet calculations. 2.16 Notes and references. 2.17 Exercises. 3 The life table. 3.1 Basic definitions. 3.2 Probabilities. 3.3 Constructing the life table from the values of q_x . 3.4 Life expectancy. 3.5 Choice of life tables. 3.6 Standard notation and terminology. 3.7 A sample table. 3.8 Notes and references. 3.9 Exercises. 4 Life annuities. 4.1 Introduction. 4.2 Calculating annuity premiums. 4.3 The interest and survivorship discount function. 4.4 Guaranteed payments. 4.5 Deferred annuities with annual premiums. 4.6 Some practical considerations. 4.7 Standard notation and terminology. 4.8 Spreadsheet calculations. 4.9 Exercises. 5 Life insurance. 5.1 Introduction. 5.2 Calculating life insurance premiums. 5.3 Types of life insurance. 5.4 Combined insurance-annuity benefits. 5.5 Insurances viewed as annuities. 5.6 Summary of formulas. 5.7 A general insurance-annuity identity. 5.8 Standard notation and terminology. 5.9 Spreadsheet applications. 5.10 Exercises. 6 Insurance and annuity reserves. 6.1 Introduction to reserves. 6.2 The general pattern of reserves. 6.3 Recursion. 6.4 Detailed analysis of an insurance or annuity contract. 6.5 Interest and mortality bases for reserves. 6.6 Nonforfeiture values. 6.7 Policies involving a 'return of the reserve'. 6.8 Premium difference and paid-up formulas. *6.9 Universal life and variable annuities. 6.10 Standard notation and terminology. 6.11 Spreadsheet applications. 6.12 Exercises. 7 Fractional durations. 7.1 Introduction. 7.2 Cashflows discounted with interest only. 7.3 Life annuities paid mthly. 7.4 Immediate annuities. 7.5 Approximation and computation. *7.6 Fractional period premiums and reserves. 7.7 Reserves at fractional durations. 7.8 Notes and references. 7.9 Exercises. 8 Continuous payments. 8.1 Introduction to continuous annuities. 8.2 The force of discount. 8.3 The constant interest case. 8.4 Continuous life annuities. 8.5 The force of mortality. 8.6 Insurances payable at the moment of death. 8.7 Premiums and reserves. 8.8 The general insurance-annuity identity in the continuous case. 8.9 Differential equations for reserves. 8.10 Some examples of exact calculation. 8.11 Standard actuarial notation and terminology. 8.12 Notes and references. 8.13 Exercises. 9 Select mortality. 9.1 Introduction. 9.2 Select and ultimate tables. 9.3 Changes in formulas. 9.4 Projections in annuity tables. 9.5 Further remarks. 9.6 Exercises. 10 Multiple-life contracts. 10.1 Introduction. 10.2 The joint-life status. 10.3 Joint-life annuities and insurances. 10.4 Last-survivor annuities and insurances. 10.5 Moment of death insurances. 10.6 The general two-life annuity contract. 10.7 The general two-life insurance contract. 10.8 Contingent insurances. 10.9 Duration of reserves. 10.10 Applications to annuity credit risk. 10.11 Standard notation and terminology. 10.12 Spreadsheet applications. 10.13 Notes and references. 10.14 Exercises. 11 Multiple-decrement theory. 11.1 Introduction. 11.2 The basic model. 11.3 Insurances. 11.4 Determining the model from the forces of decrement. 11.5 The analogy with joint-life statuses. 11.6 A machine analogy. 11.7 Associated single-decrement tables. 11.8 Notes and references. 11.9 Exercises. 12 Expenses. 12.1 Introduction. 12.2 Effect on reserves. 12.3 Realistic reserve and balance calculations. 12.4 Notes and references. 12.5 Exercises. Part II THE STOCHASTIC MODEL. 13 Survival distributions and failure times. 13.1 Introduction to survival distributions. 13.2 The discrete case. 13.3 The continuous case. 13.4 Examples. 13.5 Shifted distributions. 13.6 The standard approximation. 13.7 The stochastic life table. 13.8 Life expectancy in the stochastic model. 13.9 Stochastic interest rates. 13.10 Notes and references. 13.11 Exercises. 14 The stochastic approach to insurance and annuities. 14.1 Introduction. 14.2 The stochastic approach to insurance benefits. 14.3 The stochastic approach to annuity benefits. *14.4 Deferred contracts. 14.5 The stochastic approach to reserves. 14.6 The stochastic approach to premiums. 14.7 The variance of r_L . 14.8 Standard notation and terminology. 14.9 Notes and references. 14.10 Exercises. 15 Simplifications under level benefit contracts. 15.1 Introduction. 15.2 Variance calculations in the continuous case. 15.3 Variance calculations in the discrete case. 15.4 Exact distributions. 15.5 Non-level benefit examples. 15.6 Exercises. 16 The minimum failure time. 16.1 Introduction. 16.2 Joint distributions. 16.3 The distribution of T . 16.4 The joint distribution of (T, J) . 16.5 Other problems. 16.6 The common shock model. 16.7 Copulas. 16.8 Notes and references. 16.9 Exercises. Part III RISK THEORY. 17 The collective risk model. 17.1 Introduction. 17.2 The mean and variance of S . 17.3 Generating functions. 17.4 Exact distribution of S . 17.5 Choosing a frequency distribution. 17.6 Choosing a severity distribution. 17.7 Handling the point mass at 0. 17.8 Counting claims of a particular type. 17.9 The sum of two compound Poisson distributions. 17.10 Deductibles and other modifications. 17.11 A recursion formula for S . 17.12 Notes and references. 17.13 Exercises. 18 Risk Assessment. 18.1 Introduction. 18.2 Utility theory. 18.3 Convex and concave functions; Jensen's inequality. 18.4 A general comparison method. 18.5 Risk measures for capital adequacy. 18.6 Notes and references. 18.7 Exercises. 19 An introduction to stochastic processes. 19.1 Introduction. 19.2 Markov chains. 19.3 Martingales. 19.4 Finite-state Markov chains. 19.5 Notes and references. 19.6 Exercises. 20 Poisson processes. 20.1 Introduction. 20.2 Definition of a Poisson process. 20.3 Waiting times. *20.4 Some properties of a Poisson process. 20.5 Nonhomogeneous Poisson processes. 20.6 Compound Poisson processes. 20.7 Notes and references. 20.8 Exercises. 21 Ruin models. 21.1 Introduction. 21.2 A functional equation approach. 21.3 The martingale approach to ruin theory. 21.4 Distribution of the deficit at ruin. 21.5 Recursion formulas. 21.6 The compound Poisson surplus process. 21.7 The maximal aggregate loss. 21.8 Notes and references. 21.9 Exercises. 22 Credibility theory. 22.1 Introduction. 22.2 Conditional expectation and variance. 22.3 General framework for Bayesian credibility. 22.4 Classical examples. 22.5 Approximations. 22.6 Conditions for exactness. 22.7 Estimation. 22.8 Notes and references. 22.9 Exercises. 23 Multi-state models. 23.1 Introduction. 23.2 The discrete-time model. 23.3 The continuous-time model. 23.4 Notes and references. 23.5 Exercises. Appendix A review of probability theory. A.1 Introduction. A.2 Sample spaces and probability measures. A.3 Conditioning and independence. A.4 Random variables. A.5 Distributions. A.6 Expectations and moments. A.7 Expectation in terms of the distribution function. A.8 The normal distribution. A.9 Joint distributions. A.10 Conditioning and independence for random variables. A.11 Convolution. A.12 Moment generating functions. A.13 Probability generating functions. A.14 Mixtures. Answers to exercises. References. Index.
